

Diarostop ED

An Authentic loose dropping controller

Diarrhea in poultry can be caused by various reasons like, Nutritional imbalance, Microbial factors, High intake of Minerals, Water quality, Climate factors, Poor quality of dietary fat or rancid fat, During Peak production, Excess protein, Various stress, Over dosage of Salts, Excess usage of Antibiotics and Medicines, Excessive Mycotoxins and Mold, Internal organs damage and various other reasons.

Diarrhea also leads to various other issues, Poor digestion, Bioavailability of Nutritional factors, lack of Immunity, impact in Growth and productivity in worst case it will lead to an increase in Mortality.

DIAROSTOP ED is a well-advanced formulation to consistently improve and maintain the gut health, Control Pathogens and allow beneficial microbes to colonize in the gut, Improve digestion and Immunity. Control diseases; it also supports the birds to perform better during Peak production.

DIAROSTOP ED contributes to maintaining litter condition in dry form which reduces Fly Larvae, Ammonia, Nitrate and Pathogens level in Litter and keeps the birds healthy.

causes of diarrhea

Peak production

Vaccination

Multiple stress

Poor gut health

Severe medications

Excess protein in Feed

Excessive Antibiotics usage

Viral and Bacterial infection

Over dosage of Salt & Minerals

High Mycotoxin & Mold presence in Feed

Types of chicken poops

Yellow poop
Corn diet or Coccidiosis

Orange poop
Intestine Lining Shedding

White poop
Too much water or gumboro disease

Black poop
Black treats or Internal Bleeding

Red poop
Intestine Lining or Bloody stool

Green poop
Too many greens OR Marek's disease

Clear poop
Excess water or Vent gleet

Suitability :

- During Peak production loose dropping for Commercial Layers and Breeders.
- Entire lifecycle for Broilers.
- Before and after Vaccination and Medication.
- Poor Raw material Quality and Mycotoxin and rancidity issues.
- Excessive minerals and salt in formula.
- High protein diet.
- During high water intake.

Benefits :

1. Diarostop ED instantly inhibits Pathogens in the Gut which is core reason for diarrhea.
2. Diarostop ED functions in re-absorption of water.
3. Improves digestibility and Nutritional bioavailability.
4. Improves overall birds health and immunity.
5. Quick recovery and optimum litter quality.
6. Litter quality under shed in dry form which reduces the Ammonia level and Fly population.
7. Inhibits Pathogens load in litter and reduces possibility of spreading diseases.

Dosage :

Prevention : 1.5 Kg per Ton of Feed

Peak production period (22nd to 30th. Weeks) : 2 Kg per Ton of Feed

Treatment (Several Loose dropping) : 2.5 Kg per Ton of Feed for 3 Weeks and 1.5 Kg per Ton of Feed for maintenance

Manufactured & Marketed by :

Registered Office: No. 11, VOC Street, Ponmalaipatti, Trichy - 620 004, Tamilnadu, India.
